**Subject:** 301(h) Program ICR Renewal

Regional 301(h) Coordinators—Regions 1, 2, 9, and 10

Happy New Year to all.

I am in process to renew the 301(h) Information Collection Request. The current ICR is about to expire. We need a current ICR in order to collect several categories of information from the 301(h) POTWs and from the states in which they are located. I need to get an updated list of POTWs currently in the 301(h) program for purposes of completing the Supporting Statement. Please provide me an update of POTWs for your respective region, as of December 1, 2013. I need this information as soon as possible, and by no later than Jan. 10. If you cannot provide me with the information by this time, please let me know by email, with the phone number where you can be reached. I am on leave and not in the office. However, I will be checking my email periodically.

At this time I only ask that you let me know all POTWs that are under a current waiver—POTW holds a current waiver, it does not have a final effective NPDES permit for secondary treatment in place. For purposes of this exercise any POTW that is in process of renewal, up to and including a draft secondary permit for facilities that are being denied or are withdrawing, are considered to still be a current waiver recipient.

I need this information to update the tables for the supporting statement. You can provide this information by simply marking up the table below. (I know you have updated the status of POTWs more recently and this table represents the status from

several years ago, but is the easiest way for me to update the supporting statement for the ICR.). If you indicate that a POTW no longer is a 301(h) waiver facility—please provide the date when the secondary treatment NPDES permit became effective. If not in 2013, the year is all that is necessary. \_

Thank you for your assistance.

Ginny
